SUMMARY

AI/ML Engineer with hands-on experience developing Generative AI applications using Python, Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG). Skilled in prompt engineering, LangChain, and vector databases (FAISS) for semantic search and retrieval. Experienced integrating LLM APIs (Google Gemini) into production-style Python applications, with a strong foundation in Machine Learning, NLP, and REST API-based development. Collaborative and detail-oriented, with a track record of delivering AI-driven solutions from concept to working application.

SKILLS

Technical Skills: Python, Generative AI, Large Language Models (LLMs), Prompt Engineering, RAG (Retrieval-Augmented Generation), Machine Learning, NLP, REST APIs, SQL

Tools & Frameworks: LangChain, Google Gemini, FAISS (Vector Database), Sentence Transformers, spaCy, Scikit-learn, Git, GitHub, Streamlit

Data & Analytics: Pandas, NumPy, Power BI, DAX, Power Query, EDA, Statistical Analysis, Data Cleaning, Feature Engineering, Model Evaluation, Hyperparameter Tuning

EXPERIENCE

AI/ML & Data Science Trainee — PySpiders

Jan 2026 – Aug 2026

- Completed intensive, project-based training in Python, SQL, Machine Learning, and Generative AI, applying software development best practices across assignments and mini-projects.
- Built and evaluated Generative AI and RAG workflows, applying prompt engineering techniques and model evaluation methods to practical, business-style use cases.

Data Analytics, AI & ML Intern — Novi Tech

Jun 2025 – Aug 2025

- Collected, cleaned, and preprocessed real-world datasets using Python and Pandas, and performed exploratory data analysis (EDA) to prepare data for downstream ML and NLP workflows.
- Trained and evaluated Machine Learning models using Scikit-learn, analyzing precision, recall, and other performance metrics to guide iterative model development.

PROJECTS

ResumeLens AI — Generative AI Resume ATS Analyzer

Python, LangChain, Google Gemini, FAISS, Sentence Transformers, spaCy, Streamlit

- Developed a Generative AI application integrating the Google Gemini LLM via LangChain to analyze resume-to-job-description alignment, generating an ATS score, matched skills, missing skills, and improvement suggestions.
- Implemented RAG-based semantic retrieval using a FAISS vector database and Sentence Transformers to retrieve job-relevant resume content for downstream LLM analysis.
- Designed and optimized prompts to improve LLM response accuracy, and built a Streamlit interface for PDF upload and interactive result visualization.

Insurance Fraud Triage Engine — ML Classification Pipeline

Python, Scikit-learn, Pandas, Imbalanced-learn, Optuna

- Built an end-to-end Machine Learning classification pipeline in Python to flag fraudulent insurance claims and prioritize high-risk cases for review.
- Designed leakage-resistant preprocessing pipelines using Scikit-learn's ColumnTransformer, covering imputation, encoding, and scaling.
- Addressed class imbalance through resampling and used Optuna hyperparameter tuning to improve fraud-class recall and overall model performance.

EDUCATION

B-Tech in Information Technology — Arunachala College of Engineering for Women, Anna University | CGPA: 8.73 | 2022 – 2026

Higher Secondary — Little Flower Girls Higher Secondary School | 86.5% | 2020 – 2022

CERTIFICATIONS

- Applied AI & Machine Learning – Associate Readiness, OneRoadmap (Sep 2026)
- Foundations: Data, Data, Everywhere — Google, Coursera (Sep 2025)
